**Respiratory Therapy**

As a first-year student, Conrad participated in the "Kick Butts" program sponsored by the Respiratory Therapy Club. "Our goal was to educate the public about the perils of smoking," he comments. "We used the 'carrot and stick' approach. ELAC students who gave up a pack of cigarettes at the two day campus program were given a chance to participate in a raffle for small prizes. The 'sticks' were examples of diseased lungs, a lung function test that showed smokers how much they have damaged their lungs and information on how to stop smoking. We are taught that we have a responsibility to educate the public about lung health in addition to treating respiratory and cardiac ailments. Students need to know that Chronic Obstructive Pulmonary Disease (COPD) is the third most common cause of death in America following heart attacks and cancer. Smoking and second-hand smoke is the primary cause of COPD, so our mission is to use education to save lives."

"I decided to major in respiratory therapy after visiting an emergency room when I was involved in an accident," Conrad remembers. "I was very impressed by the person who took care of me. He was so professional that I thought that he was a doctor. He told me later that he was a respiratory therapist. It is a perfect fit for me because I enjoy working with people and like the hands-on aspect of applying science to helping people."
